PROFESSIONAL WORK EXPERIENCE

Backend Developer | AHG Lab / Sandlot Technology Ventures Inc. | July 2024 - June 2026

- Developed backend systems, REST APIs, database structures, and integrations for mobile and web applications across healthcare, fitness, agriculture, and job board platforms.

Software Development Intern | AHG Lab | February 2024 - June 2024

- Supported GoGym backend development using Xano and worked with Firebase, Supabase, GCP, Figma, and Linear.
-

PROJECTS

St. Luke's Medical Center Ehub App | *GCP, Firebase Firestore, JavaScript, Docker*

- Developed backend features for patient enrollment, patient information management, payment-related workflows, and administrative dashboard operations.
- Built and maintained endpoint integrations supporting patient-facing and admin-facing application features.
- Investigated and resolved production issues involving patient records, post-operation details, service workflows, and payment status handling.
- Supported backend reliability through debugging, issue tracing, data validation, and workflow updates.

Hijo Hydroponics App | *Supabase, Python, Docker*

- Developed backend features for managing farms, greenhouses, crops, resources, crop programs, and farm activities.
- Designed and updated database tables to support crop lifecycle tracking, greenhouse assignments, resource management, and user-specific task assignments.
- Implemented crop program generation and activity scheduling using a mix of fixed templates, custom rules, date-based logic, and admin-configured programs.
- Built endpoints and backend workflows to support farm operations, crop planning, and task management.

FastR App | *Supabase, Python*

- Debugged and enhanced backend features across job posting, search/filtering, applications, user accounts, and admin workflows.
- Created and updated endpoints and database schemas for a job board web application.
- Resolved reported issues and implemented revisions to improve stability across user-facing and admin-facing features.

GoGym App | *Xano, Firebase*

- Developed backend features for authentication, gym access, membership booking, active membership tracking, coach sessions, and workout progress tracking.
- Built endpoints and database structures supporting mobile app workflows and admin dashboard functionality.
- Enhanced business logic for subscriptions, booking rules, user activity tracking, coach session management, and sales-related reporting.

Software Development Intern | AHG Lab | February 2024 - June 2024

- Supported GoGym backend development using Xano and worked with Firebase, Supabase, GCP, Figma, and Linear.
-

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C++

Platforms and Databases: Xano, Supabase, Firebase, Firestore, GCP

Frameworks/Libraries: React, Next.js, Django, jQuery

Developer Tools: Docker, Postman, GitHub, Figma, Linear, Cursor, Codex, Claude, Antigravity

EDUCATION

Technological Institute of the Philippines

Bachelor of Science in Information Technology | 2024
